

# July 2022 Infortel Cloud Release

August 3, 2022

Note: The July release was deployed in two parts occurring on July 27 and August 3.

## New

ISI has launched reporting for Cisco Webex calling! Infortel Select's Webex Calling support allows organizations to take their call accounting and analytics needs to the cloud as they move away from an on-premises PBX. With Infortel Select, enterprises don't lose visibility into calls being made. Off-the-shelf reports are tailored to specific business needs and even specific vertical markets such as healthcare, financial services, retail, and the public sector. Best yet, you can manage all your on-premises and cloud-based telecommunications in a single pane of glass.

## Fixed

- Resolved a caching issue in pricing Microsoft Teams calls
- Resolved an issue with JSON directory import
- Addressed an issue with CUCM 14 AXL API compatibility
